

Your apps talk to each other. You don’t have to.

Every time you copy data from one system to another by hand, that’s a task a machine should be doing. Integrations connect your tools so information moves automatically – bookings to your calendar, orders to your accounting, contacts to your CRM – without you in the middle.

5–10

APPS THE AVERAGE SMALL BUSINESS USES DAILY
Most share no data with each other.

~40%

OF SMALL BUSINESS HOURS SPENT ON MANUAL DATA ENTRY
Zapier / SMB survey · 2023

0

TIMES YOU SHOULD BE COPYING A BOOKING INTO A SPREADSHEET
That’s what the integration is for.

01 · WHAT INTEGRATION ACTUALLY MEANS

Not a magic button. A connection between two systems that already exist.

An integration is a configured connection between two applications. When something happens in App A, App B is automatically updated. No exporting a CSV, no re-entering data, no remembering to do it. The connection does the work.

This can be built via API (a direct technical connection between two platforms), via middleware like Zapier or Make (a connector service that bridges apps without custom code), or via native integrations that platforms build themselves. The right approach depends on what you’re connecting and how often it needs to sync.

02 · REAL SCENARIOS

What this looks like for an actual small business.

BOOKING → CALENDAR → ACCOUNTING

You get notified. You show up. The admin is already done.

ONLINE ORDER → INVENTORY → NOTIFICATION

No dashboard checking. No manual stock counts. No missed orders.

NEW CONTACT → CRM → WELCOME EMAIL

You respond to the lead when you’re ready. The system already said hello.

03 · THE REAL COST OF DISCONNECTED TOOLS

Manual data entry isn’t free. It’s expensive and it makes mistakes.

The hidden cost of disconnected apps is time. If you spend 20 minutes a day moving data between systems – copy-pasting, re-entering, reconciling – that’s over 80 hours a year. At \$50/hr in owner time, that’s \$4,000 annually spent on a task a \$30/month tool could eliminate.

There’s also the error cost. Humans make mistakes when entering data repeatedly. A transposed digit in an invoice. A booking in the wrong time zone. A contact that never made it to the CRM because someone forgot to copy it over. Integrations make those errors structurally impossible.

“Your apps talk to each other. You don’t have to.”

04 · COMMON INTEGRATION PAIRS

The connections small businesses need most.

APP A CONNECTS TO APP B

Need a strategic ally?

Website / Booking	→ Google Calendar	Appointments sync automatically
POS / Square	→ QuickBooks	Sales post to accounting without manual entry
Contact Form	→ Mailchimp / HubSpot	New leads added to mailing list instantly
Shopify / WooCommerce	→ Shipstation	Orders route to fulfillment automatically
Google Forms	→ Airtable / Notion	Intake responses go straight to your database

DEPT. OF COOPERATION • DIGITAL ALLIES

I map what you have, identify what’s costing you time, and wire it together.

The process starts with a conversation about what your current stack looks like – which apps you use, what you do manually, where data gets lost or duplicated. From there, I design the integration architecture and build it. Most setups take one to three days, and the time savings start immediately.

HOW IT’S PRICED	
Strategy conversation – what’s worth connecting	Free
Integration setup (included in Full Deployment tier)	Included
Custom integration work – Tactical Sprint	\$625/week
