

Digital Operations & Infrastructure Support Proposal

Client: Beale Street Theater: Kristina Michelson

Provider: Digital Allies: Anthony Cassella

Date: April 17, 2026

1. Executive Summary: Digital Infrastructure Support

The successful launch of the new Beale Street Theater website marks the beginning of a new digital era for the venue. To ensure the theater remains a premier destination in downtown Kingman, the digital systems—ranging from the high-speed network currently being installed to the complex Ludus ticketing integration—require proactive management.

This proposal outlines a part-time Support & Infrastructure agreement. It is designed to offload the technical burden from the creative and marketing staff, ensuring that the theater's digital foundation remains secure and operational so your team can focus on the performances on stage. Furthermore, it outlines a roadmap for expanding your digital toolset to support individual departments directly from your own domain.

2. Scope of Services

A. Current Monthly Subscription

Your current monthly subscription covers the foundational digital presence of the theater, including:

- Web Hosting & CMS Management
- SSL Certificate
- Website Backups
- Minor Design Tweaks
- AEO & SEO Monitoring (with quarterly updates to site SEO and copy)

B. Active Technical Management (Beyond Current Scope)

The following services represent the advanced infrastructure and support required for a live venue, which fall outside the scope of the standard monthly subscription:

Infrastructure & Network Security

- **Connectivity Oversight:** Direct management of the newly installed internet and network infrastructure to ensure maximum uptime.

- **Secure Systems:** Implementation and auditing of theater-wide security protocols to protect patron data and internal box office communications.
- **Hardware Sync:** Ensuring Box Office terminals, scanners, phone lines, and office hardware remain synchronized with the Ludus and Duda ecosystems.

Technical Operations & Event Support

- **Vendor Coordination:** Serving as the primary point of contact for technical vendors (Ludus, ISP, Hardware providers).
- **Technical Liaison:** Working with the internal crew to ensure all digital triggers, show-specific network needs, and technical integrations are verified before every major production.
- **Emergency Protocol:** On-call availability for critical technical failures (e.g., ticketing system offline or network drops during a live event).

Digital Maintenance Operations (Monthly SOP) Executing the Web Operations Version 1.3 SOP on the 1st of every month:

- **Link & Asset Audit:** Monthly scans for 404 errors on dynamic show pages to ensure a smooth patron experience.
- **Data Integrity:** Verifying that the Ludus custom widgets and Google Sheet collections are syncing perfectly to prevent ticketing display errors.
- **Staff Training:** Quarterly technical refreshers for new staff or volunteers using the BST Staff Training Binder materials.

Departmental Workflow & Tool Integration (Growth & Expansion) Digital tools can be built as secure, accessible extensions of your own website domain to support various departments. This ensures all tools are centralized, branded, and secure.

- **Education Department:** Custom calendars with automated booking features seamlessly tied to Ludus or other management tools.
- **Marketing Department:** AI integration for marketing automation, custom in-house design tools, automated event marketing copy, and campaign tracking.
- **Production Department:** Private digital dashboards containing technical specs, intermission ad management, music libraries, and equipment tracking/maintenance logs.
- **Booking & Admin:** Automation for show settlements, internal email automation, production sheet generation, and advertising tracking.
- **AI Chatbot Integration:** Integrating the previously designed AI-powered patron chatbot directly into the BST worksuite for automated, 24/7 customer service and ticketing assistance.

3. Implementation Logic

Service Category	Current Subscription	Option 1 (15 Hrs)	Option 2 (25 Hrs)

Web Hosting, CMS, SSL, Backups	✓		
AEO, SEO & Minor Design Tweaks	✓		
Monthly Manual Health Audit		✓	✓
Remote Technical & Vendor Support		✓	✓
Foundational Departmental Workflows		✓	✓
On-Site Network Management			✓
Pre-Event Equipment Sweeps			✓
Advanced AI Chatbot Dev			✓

4. Proposal Options

We offer two tiers of support, each available under two different billing structures depending on your preference for flexibility vs. predictability:

- **Hourly Billing:** Billed at \$30/hour. Hours are tracked and have the potential to go over the estimated monthly commitment based on the theater's active needs.
- **Set Retainer:** Billed at \$40/hour for the committed hours. This is a fixed monthly cost (set in stone) that guarantees availability without fluctuating invoices.

Option 1: Essential Maintenance & Support

- **Commitment:** 15 Hours per month.
- **Focus:** Routine maintenance, monthly health checks, software syncing, remote technical support, and setting up foundational departmental workflows.
- **Investment (Hourly):** Estimated \$450 /mo (*Subject to overages at \$30/hr*)
- **Investment (Set Retainer):** \$600 /mo (*Fixed*)

Option 2: Comprehensive Digital Operations & Expansion

- **Commitment:** 25 Hours per month.
- **Focus:** Everything in Option 1 + On-site technical coordination, pre-event equipment sweeps, active vendor management, network infrastructure security, and dedicated hours for building out advanced departmental workflows (including the AI Chatbot).
- **Investment (Hourly):** Estimated \$750 /mo (*Subject to overages at \$30/hr*)
- **Investment (Set Retainer):** \$1,000 /mo (*Fixed*)

5. Next Steps

Please review the options outlined above. Let's set up a time later this week to discuss everything and determine which level of support makes the most sense for the theater moving forward.
