

Um, I think it should be more friendly. Two, should it learn? Lean more— Local and neighborly, or more professional and polished? Uh, local and neighborly. How much humor is okay? None. Light. Or occasional? Um, somewhere between— Somewhere after light and occasional. Those are kind of the same thing, I think. Um, I'm down with humor. I think it's great. Um, some. I think it should be a mix. I and we. This will be easier to catch leads, I think. Um, and I think it's okay to separate the. I run. Digital allies website— And. Discovery meetings and in-person— but the let's. Catch the. You. Can be multi. Or seemingly multiple people. Under. One business.

Perfect — that gives us a much clearer direction. The secondary marketing voice should feel friendlier, more local, lightly funny, and still competent, with enough flexibility to sound like “I” in direct outreach and “we” when the business presence needs to feel a little broader. ^[1] ^[2]

Updated voice direction

For marketing copy, I'd define the voice as:

Warm, neighborly, and practical.

It should sound like someone who knows local business life, understands the pressure, and offers help without making a big production out of it. The goal is to sound like a real person in the community, not a brand robot or a stiff agency voice. ^[3] ^[1]

Because you want a mix of “I” and “we,” the voice can flex by context:

- Use I for direct outreach, discovery calls, and one-to-one conversations.
- Use we for ads, service pages, and campaign language when you want the business to feel established and larger than a solo operator.
- Keep both versions grounded in the same promise: clear help, less stress, and better digital results. ^[4] ^[1]

What changes

This version should still be plainspoken, but the edges soften a little. The current brand system already pushes plain language and directness, so we're not changing the foundation — just making it easier to use in ads, social, and campaign copy.^[2] ^[4]

What shifts:

- Less ceremonial phrasing.
- Less “clever architecture” in the copy.
- More human phrasing and local familiarity.
- More direct acknowledgment of time pressure and overwhelm.

What stays:

- No jargon.
- No fluff.
- No hype.
- No fake friendliness.

Voice rules

Here's the practical version you can store and reuse:

- Speak like a helpful local expert.
- Keep sentences short enough to skim in an ad.
- Use humor lightly, but don't force punchlines.
- Be confident without sounding corporate.
- Make the reader feel understood before you try to impress them.

And for the “I vs we” split:

- I = personal trust, discovery, small-business conversations.
- We = the service brand, ad copy, broader campaign presence.
- Both should still feel like the same operator behind the curtain.

Service-offering style

For service offerings, I'd recommend a format like this:

What it is.

Simple, human definition.

What it solves.

The frustration or time loss it removes.

What you get.

The practical result, in everyday language.

That structure works because it turns your services into relief, not just deliverables. It also fits your existing service documentation, which already emphasizes what the client gets and keeps the language straightforward. ^[4]

Example tone samples

- “A website that looks good, loads right, and doesn’t become another thing you have to babysit.”
- “We connect the tools you already use so you can stop doing the same task twice.”
- “Search visibility without the keyword soup.”
- “Automation for the repetitive stuff that keeps stealing your time.”
- “Support that actually feels like support.”

Brand voice summary

Here’s the clean one-line version:

Digital Allies marketing voice = friendly, local, lightly funny, plainspoken, and trustworthy, with enough flexibility to sound personal in outreach and broad in campaigns.

It keeps the competence of the main brand voice but drops the formality that makes ads feel heavy. That should make it easier to sound human while still sounding like Digital Allies. ^[1] ^[2]

Next step

The next smart move is to turn this into a short, usable voice sheet with:

- tone pillars,
- do/don’t examples,
- ad-ready phrasing,
- and a service-offering rewrite template.

After that, we can look at the campaign you attached and start building actual copy from this new voice.
