

Atomic Finds ATX — Inventory, SKU & Photo Intake

DRAFT

Suggested finish-by: September 12, 2026

For: Jennyfer, owner of Atomic Finds ATX

Prepared by: Anthony / Digital Allies

Purpose: Establish one reliable record for each physical item before it is listed, published, or promoted.

Opening Principle

One physical piece = one inventory record = one SKU.

Public website, Marketplace, and Instagram details must come from the **verified item record** – not memory, an old caption, an AI guess, or a photo alone.

📌 This principle anchors every section that follows. When in doubt, return to it.

1. Inventory Home and Ownership

Where does the master record live? (Phase 1)

- ☐ CMS Suite
- ☐ Spreadsheet feeding the CMS Suite
- ☐ Other: _____

Where do original/source photos live?

- ☐ Google Drive
- ☐ CMS media library
- ☐ Both
- ☐ Other: _____

If both are used, which is the source of truth?

- ☐ Google Drive is the original-photo source; CMS contains approved web copies
- ☐ CMS is the source
- ☐ Other: _____

Who may do each job?

Task	Jennyfer	Anthony / Digital Allies	Other
Create draft record			
Assign SKU			
Add source photos			
Verify measurements & condition			
Confirm price			
Change availability/status			
Publish to website			
Archive after sale			

2. SKU Control

SKU range 0000-0049 is permanently assigned. New physical inventory begins at **0050** and increments upward. A SKU is **never reused** – including after an item is sold, archived, removed from the website, or no longer active.

☐ Approved

☐ Revise: _____

Who assigns a SKU?

At what moment is it assigned?

- ☐ At acquisition
- ☐ When the inventory record is created
- ☐ Other:

Where is "next available SKU" maintained?

Who updates it when a new batch is added?

3. Practical Intake Record

Which information can you realistically capture at acquisition?

- ☐ Date acquired
- ☐ Seller/source name or listing link
- ☐ Acquisition price
- ☐ Original seller description
- ☐ Original listing screenshots/photos
- ☐ Maker label, stamp, tag, or marking
- ☐ Initial condition photos
- ☐ Approximate source type without private details
- ☐ Known age/provenance claim (clearly marked as unverified until supported)
- ☐ Other: _____

What must be photographed immediately — before cleaning, repairs, styling, or moving the piece?

Who uploads intake photos, and where — on the same day?

4. Photos and Asset Format

Confirm the final project-asset rule:

Source images may arrive in their original format. Before an asset enters the approved project library, website, Marketplace export set, or marketing-asset system, save the final project asset as a **PNG**.

- ☐ Approved
- ☐ Revise: _____

Confirm filename rule:

{slug}-{tag}-{number}.png

Part	Definition
Item slug	Lowercase kebab-case nickname; otherwise a short descriptive slug
Product-photo tag	4-digit SKU
Marketing-asset tag	Short tag: insta-post, website-banner, flyer, holiday2026
Number	Begins at 1, increments per slug + tag pair

Minimum photos required before listing:

- ☐ Overall front
- ☐ Overall side/back
- ☐ Material/texture detail
- ☐ Wear, repair, or condition detail
- ☐ Measurements
- ☐ Staged/context image
- ☐ Other: _____

Special photo requirements for large, fragile, upholstered, glass, outdoor, or woven pieces?

5. Incomplete-Record Rule

An incomplete item remains **Acquired** or **In Prep**. It may **not** become Available or be promoted as available.

- ☐ Approved
- ☐ Revise: _____

Which details are usually hardest to capture — and what would make collection easier?

Final Principle

When in doubt, leave it blank.

An unknown field should be left **blank**, marked **unknown**, or kept **internal**.

It should **never** be filled with a guess.

Blank

Leave the field empty until the correct information is confirmed.

Unknown

Mark it explicitly so everyone knows it still needs verification.

Internal

Keep sensitive or unverified details out of public-facing records.
